# **The Role of Emerging Predictive IT Tools in Effective Migration Governance**

**“Advancing Data-Driven Decision-Making in Migration Management”**

**EMN Georgia and EMN Estonia**

**20 September 2022**

**Colleen Boland**  
**Autonomous University of Barcelona**

# ITFLOWS project summary

Provide accurate predictions on migration (and asylum flows)

Provide policy solutions for the management of migration and integration of refugees in the EU

Propose solutions for reducing potential conflict/tensions between migrants and EU citizens

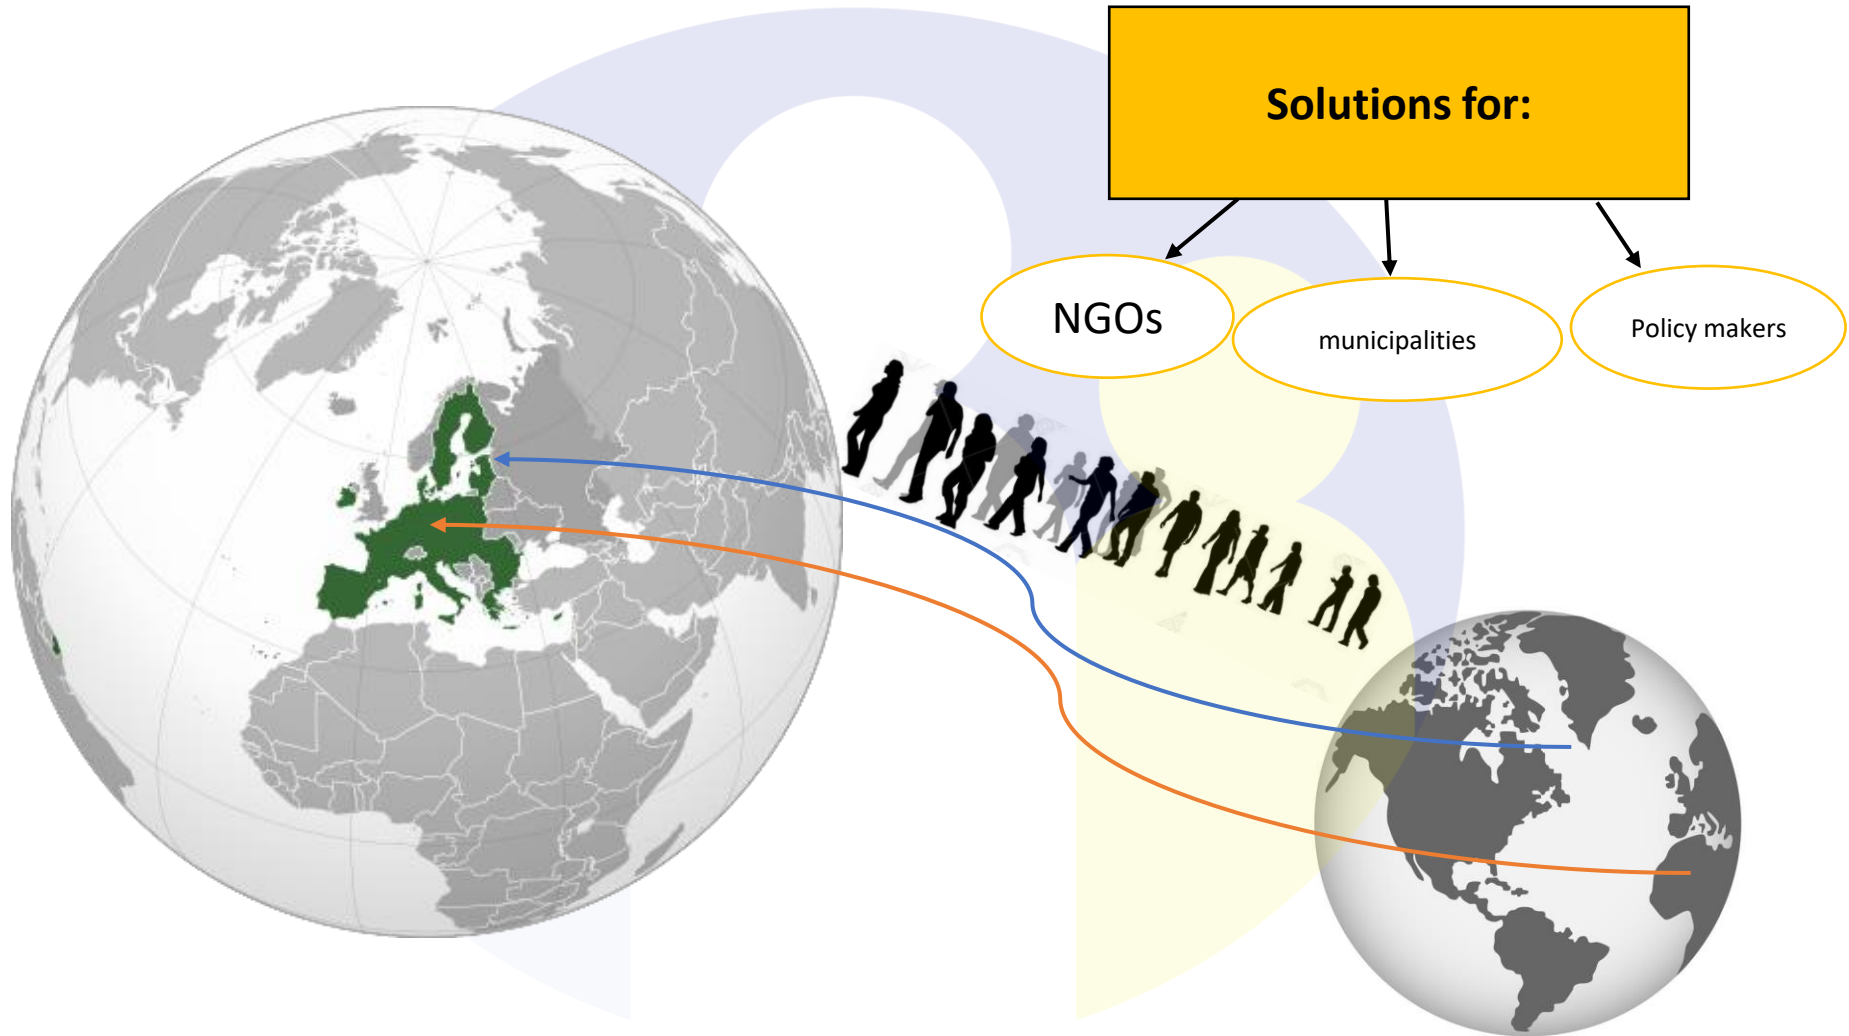

## KEY FACTS

36  
months

14 EU  
Partners

8 EU  
Countries

1 IT-  
Tool

# Users Board

## GREECE

ΔΗΜΟΣ

COUNCIL

# Policy Working Group

# Looked at existing forecasting tools

## Jetson tool

funded and operated by UN High Commissioner for Refugees

## Early Warning and Preparedness System tool (EPS-Forecasting)

funded and operated by the European Asylum Support Office

## Foresight

currently funded and operated by Danish Refugee Council (DRC). Initially funded by Danish Ministry of Foreign Affairs, with the model and user interface developed in collaboration with IBM.

# Data sources + the EUMigraTool works

## Push/Pull Factors

- \* UNHCR
- \* iDMC
- \* EMDAT
- \* World Bank
- \* Eurostat
- \* Population
- \* EASO CoO Portal
- \* Konfliktbarometer
- \* European Country of Origin Information Network (ECOI)
- \* Rulers, Elections, and Irregular Governance (REIGN)
- \* FRONTEX
- \* HDX
- \* ECMWF
- \* OECD
- \* IPC Food Security
- \* IMF
- \* IOM
- \* ACLED
- \* WDI
- \* AIDA
- \* City
- \* Uppsala Conflict Data Program (UCDP)

## Public Attitudes

- \* European Social Survey
- \* Eurobarometer
- \* European Values Study
- \* Eurostat

## Real-time Data

- \* Twitter
- \* Google Trends
- \* GDELT

Data is stored in dedicated repository

Anonymisation if necessary

Simulation engine

Natural Processing Language (NPL)

Image processing

# EUMigraTool architecture

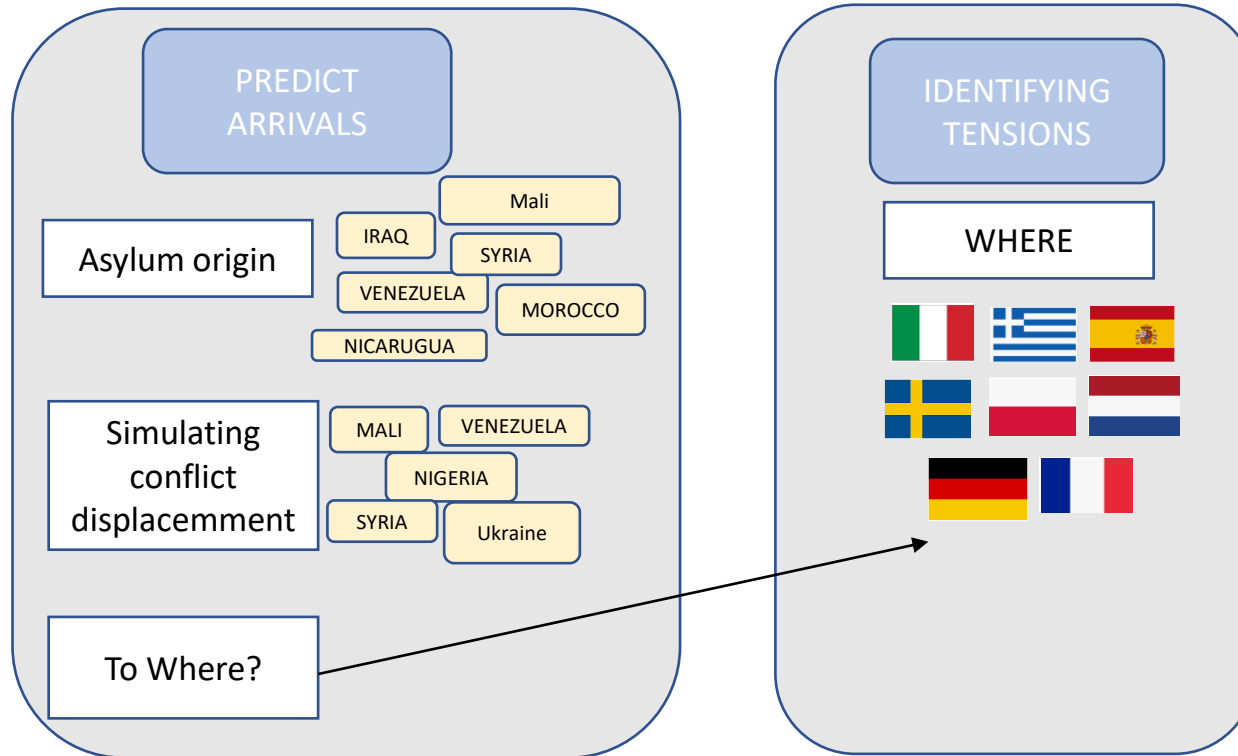

## Large scale model

- The Large-Scale Model (LSM) <sup>2</sup> monthly predictions of asylum applications in the EU for a variety of bilateral (i.e., from country of origin to the EU Member State) cases.
- State of the art machine learning approaches, including neural network architectures and time series analysis. correlation analysis between raw data sources and simulation.
- Provides intuitions on attitudes towards migration among populations in all European destination countries, using the Twitter Sentiment Analysis model data as input, and the most influential or relevant determinants of attitudes towards migration.
- Inputs and methods : Topic Modeling by monitoring national press; asylum seeker data from Eurostat (the official EU statistics office); the output files of the agent-based simulation of the EMT's Small Scale model; and output files of asylum application forecasts of the Google Trends Analytics model.

## Small scale model

- The Small-Scale Model (SSM) <sup>2</sup> distribution of incoming asylum-seekers/unrecognised refugees arriving to neighbouring countries of conflict origins.
- Generalised and automated simulation development approach and the Flee agent-based simulation code, optimised for simplicity and flexibility.
- Data from the United Nations High Commissioner for Refugees (UNHCR), the Armed Conflict Location and Event Data Project (ACLED), OpenStreetMap and population data using the City Population database or other population sources.
- Conflict model is constructed, run and validated by comparing the simulation results to the existing camp registrations obtained from UNHCR.

## the EUMIGRATOOL (EMT)

The EMT is a **solution-oriented tool** with two main functions:

- (I) **Predicting migration flows**
- (II) **Detecting risks of tensions related to migration**

## Attitudes in EU countries

Estimated using Twitter data

Tweets that are related to migration are processed and analysed

## Asylum seekers in EU countries

Using Eurostat data for now

Will improve it with AI models and additional data sources

## Simulation for Syria & Nigeria camps

Simulating the number of refugees that are expected to arrive daily in specific camps in neighbouring countries (agent based simulations)

## The GDELT Project

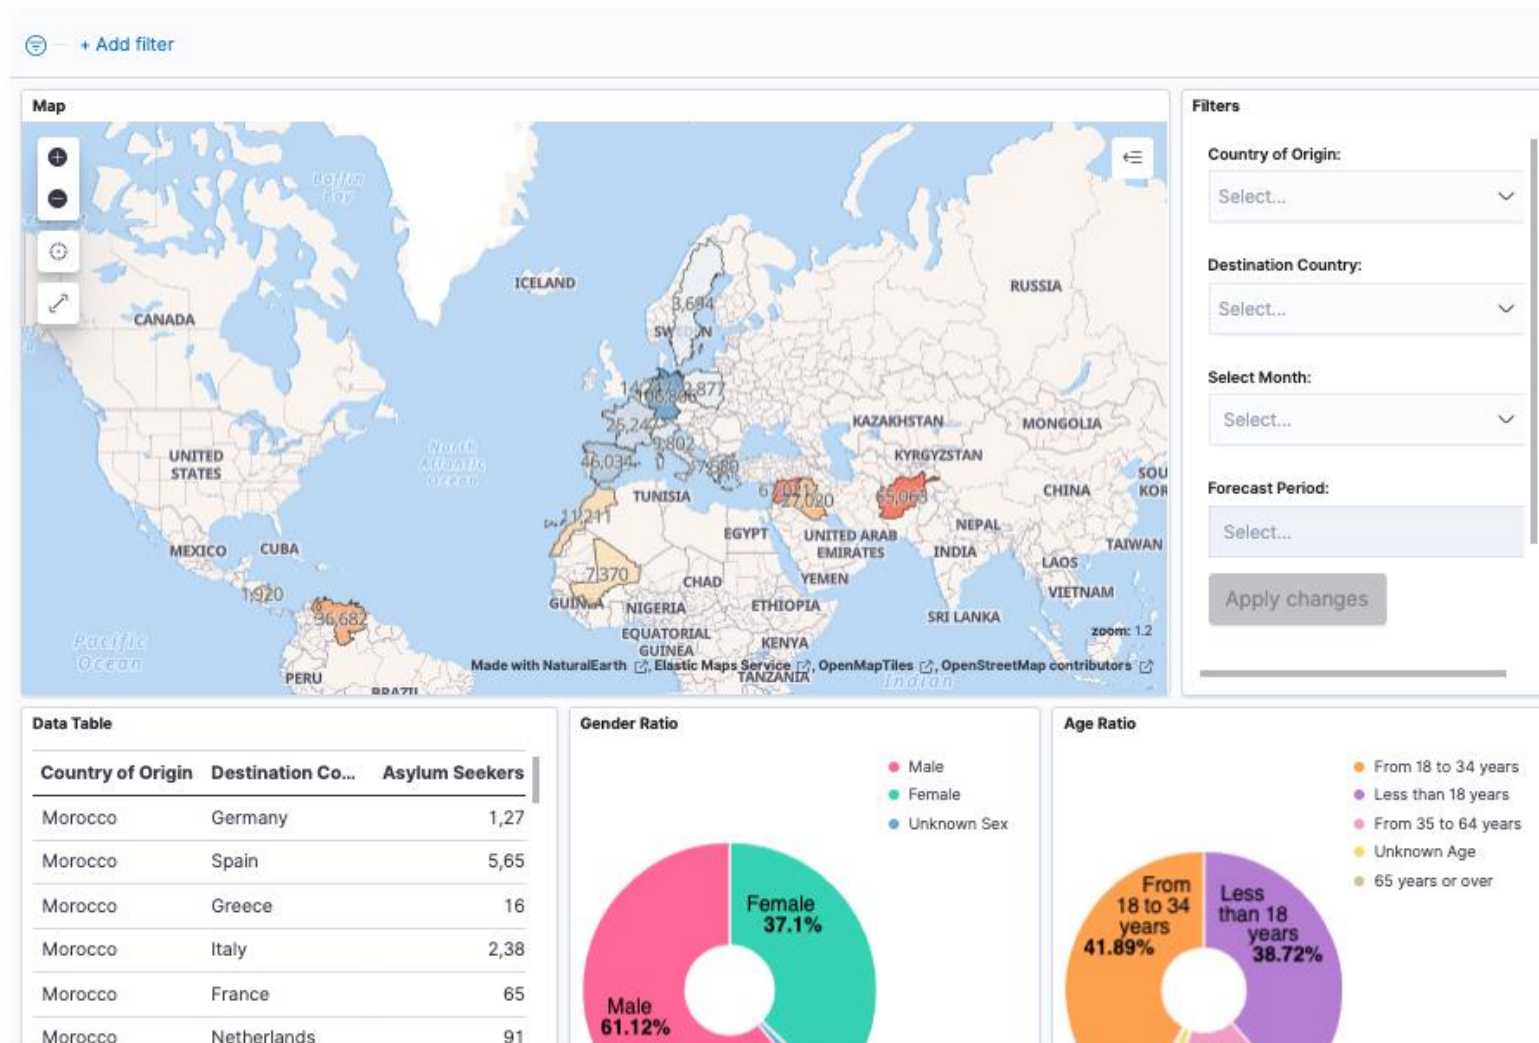

### Flow predictions

Based on news articles processing

Indications of increase or decrease of migration flows across migration routes specified by FRONTEX

# Predictions asylum seekers/unrecognised refugees

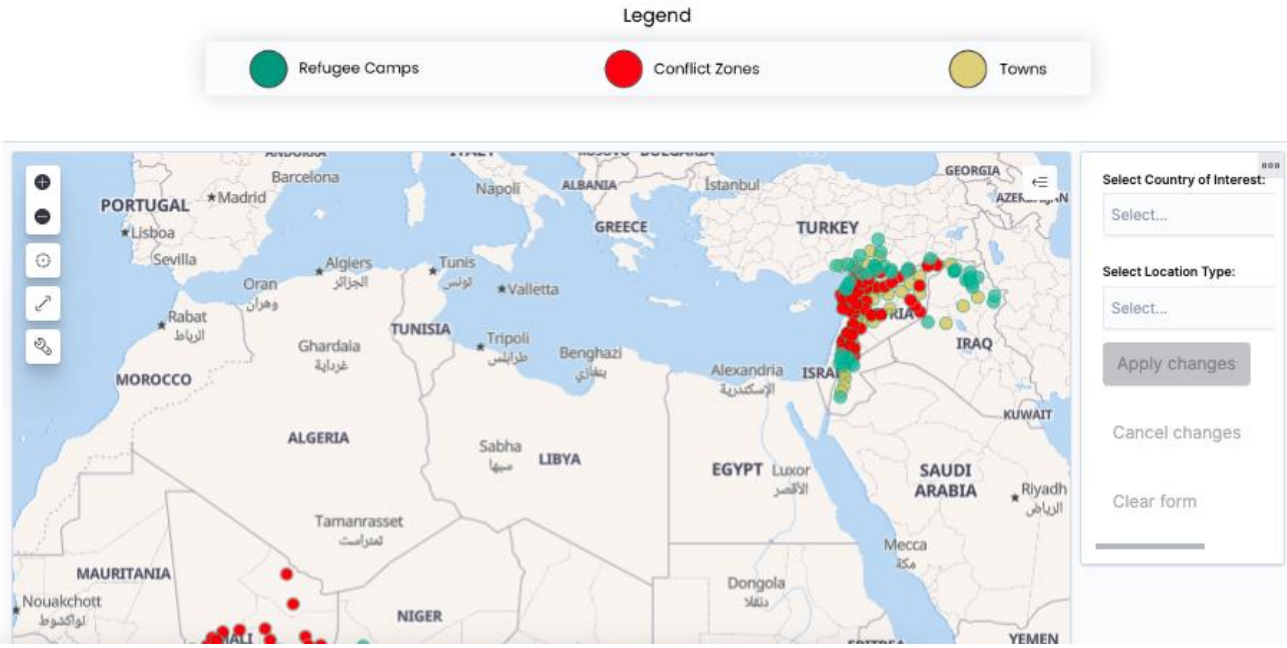

Predictions of Asylum Seekers / Unrecognized Refugees per destination and origin country

## 1. Origin Countries with conflict locations and Asylum Seekers / Unrecognised refugee camps

Home / Dashboards / Predictions / 1. Origin Countries with conflict locations and Asylum Seekers / Unrecognised refugee camps

Map displaying conflict zones in various countries and nearby Refugee Camps. Contains number of people in these camps during the period 2016-2022.

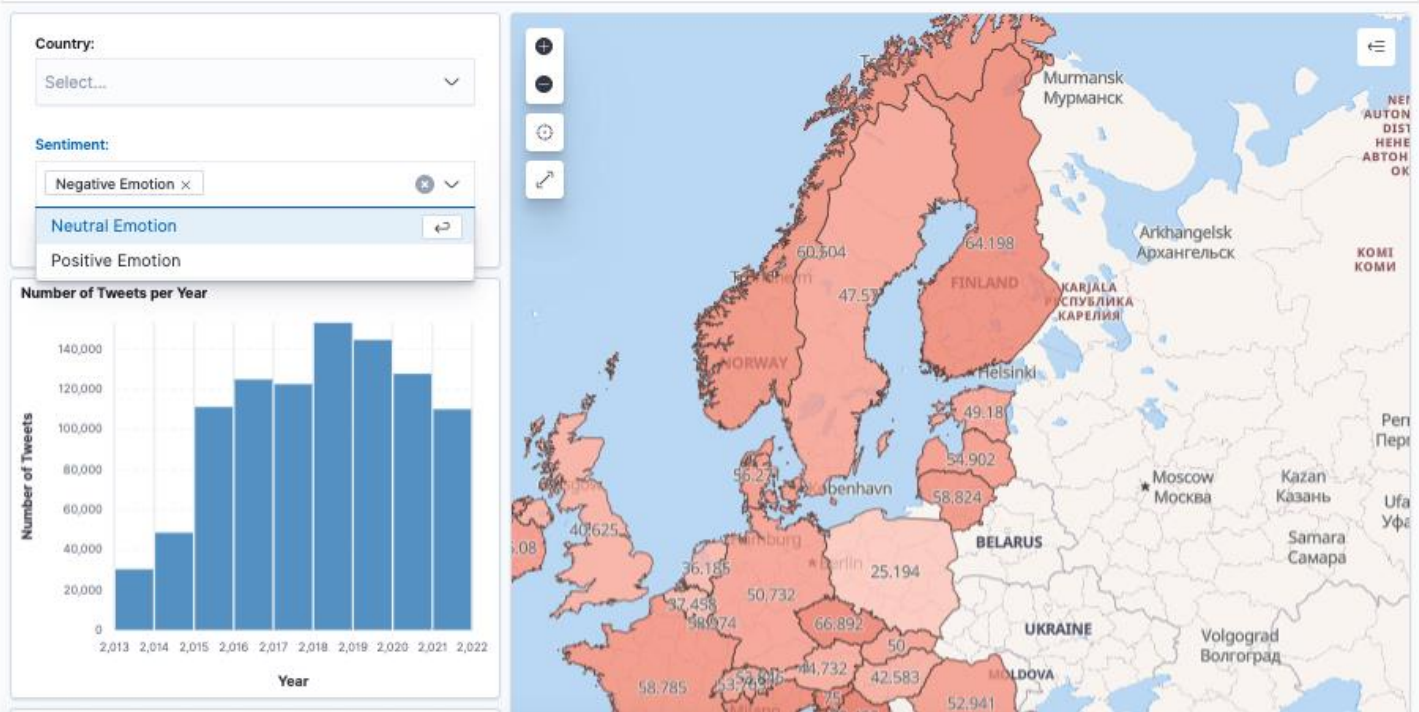

## 3. Attitudes based on Twitter analysis

Home / Dashboards / Attitudes / 3. Attitudes based on Twitter analysis

Europe Map displaying percentage of tweets expressing sentiments (positive, negative and neutral sentiments) per Country for a period of time (2013 – 2022).

Simple point-and-click operations

Help/tips integrated within the UI

Web-based application

Examples and guides on how to use the tool

No explicit technical background requirements

Fully customizable operations (data sources, parameters etc.)

Export comprehensive results/reports to printable format
